

ADVANTAGES

- Can be used to upgrade existing installations
- Range of standard sizes
- Rapid Adsorption Dynamics (RAD)
- MERV15 (13A) and ePM1 70% acc. ISO 16890
- Combination mini-pleat V-cell filtration solution for particulate and molecular contaminants
- Ideal for filtering organic acids
- 100% incinerable

Application	Remove acidic gaseous contaminants and MERV15 (13A) particulates where the primary concern is the impact air quality has on the equipment and/or processes within a space, while still considering the health and comfort of the building occupants. Typically used in the following industries: cultural heritage, food & beverage, laboratory space.
Frame	Plastic molded
Media	Synthetic; Impregnated Activated Carbon
Dimensions	Filter front dimensions according EN 15805
Max airflow	1.25 x nominal flow
Max Temperature (°C)	50
Relative Humidity max	70%
Installation Options	Front access frames and side access housings are available. See related products below
Comment	Maximum face velocity of 500 fpm.

A compact filter with an additional molecular filtration media layer to provide enhanced IAQ through combined particle filtration and gas filtration.

CityCarb is the ultimate solution when a high performance compact filter and a high performance molecular (gas, odor) filter must be installed in a single location. High efficiency particle filtration media is combined with an exclusive "targeted" molecular filtration media that exploits the benefits of "Rapid Adsorption Dynamics" (RAD) to specifically remove low molecular weight organic acids. These contaminants are unavoidably released from wood- and paper-based artifacts in cultural heritage establishments due to the degradation of cellulosic polymers. As the target pollutants are from internal sources, the CityCarb CH filter should be mounted in the re-circulation or return air system. CityCarb HC is also extremely effective against the external source pollutants; ozone and nitrogen dioxide.

The filter should be replaced when the pressure loss exceeds the maximum allowable value for the ventilation system or after a maximum of one year. In accordance with good practice, used CityCarb filters should be bagged immediately after removal and disposed of by the appropriate route.
